

HYDCHEM 351

GENERAL DESCRIPTION

HYDCHEM 351 is all-organic based, multi-metal corrosion inhibitor and deposit control product. Formulated for waters with higher scaling tendency, which are less corrosive. This is a less concentrated version of **HYDCHEM 351**, making it suitable for smaller systems. Formulated with higher levels of synthetic polymers and phosphonates than other series products, which utilise same feed rate (300 PPM).

USAGE

HYDCHEM 351 may be fed neat or in a diluted solution with soft water. It may be fed into the system piping, tower basin or a flow assembly. The product should never be fed directly upstream of conductivity or pH probes. Concentrated solutions of **HYDCHEM 351** should not be fed simultaneously, in close proximity to cationic biocides or dispersants such as HYDCHEM401 or HYDCHEM 382. Does not require any special pumps.

TYPICAL PROPERTIES

Appearance	:	Clear Yellow Liquid
pH (neat)	:	3. – 5
Specific gravity	:	1.1 – 1.2

HANDLING

Control of the product is done by means of the phosphate test. Control limits are 5 –15 PPM phosphate as PO₄.

AVAILABILITY

HYDCHEM 351 is available in 35 kgs jerry cans.

MANUFACTURER

HYDCHEM AGENCY

No.11/10,PILLAIYAR KOIL STREET,
KACHANANGKUPPAM, AMBATHUR,
